

Job Description

Position Title: Project Engineer

updated: July 30, 2010

Position Summary:

ALZETA Corporation, a leading manufacturer of advanced combustion and gas treatment equipment, is searching for a qualified hardware-oriented engineer to assist in delivering ALZETA products and systems to our customers. Motivated individuals with strong hands-on technical skills, proven project experience, and excellent communications skills are required.

Duties and Responsibilities:

- Responsible for coordination of activities required to deliver ALZETA combustion equipment to customers. These responsibilities include maintaining schedule, budget, and technical control of projects.
- Ensures effective communication and coordination between suppliers, in-house engineering and manufacturing teams, and the customer.
- Ensures compliance with contract requirements, all applicable regulatory codes, and ALZETA engineering and manufacturing standards
- Must have sufficient technical knowledge and attention to detail to recognize technical problems as they develop, and to be able to initiate corrective actions
- In addition, the Project Engineer will provide technical support to members of the Sales and Marketing group in support of proposals and promotional efforts

Experience Required:

- BS or MS in Mechanical Engineering
- Entry level up to 5 years relevant work experience in a related field
- Excellent oral, written, and interpersonal communication skills required
- Comparable combination of education, training, and experience will be considered

Reports To: Vice President of Sales and Marketing
Salary Range: Commensurate with experience and qualifications.
Facility Location: Santa Clara, California 95054
